Assignment 17 Solutions

1.Create a function that takes three arguments a, b, c and returns the sum of the numbers that are evenly divided by c from the range a, b inclusive ?

Examples:

```
 evenly_divisible(1, 10, 20) ➞ 0
    # No number between 1 and 10 can be evenly divided by 20.
evenly_divisible(1, 10, 2) ➞ 30
    # 2 + 4 + 6 + 8 + 10 = 30
evenly_divisible(1, 10, 3) ➞ 18
    # 3 + 6 + 9 = 18
```

In [37]:
```
def evenDivisible(a,b,c):
    divList = []
    for num in range(a,b+1):
        if num%c == 0:
            divList.append(num)
    print(f'{a,b,c} ➞ {sum(divList)}')

evenDivisible(1,10,20)
evenDivisible(1,10,2)
evenDivisible(1,10,3)
```

```
(1, 10, 20) ➞ 0
(1, 10, 2) ➞ 30
(1, 10, 3) ➞ 18
```

2.Create a function that returns True if a given inequality expression is correct and False otherwise ?

Examples:

```
 correct_signs("3 < 7 < 11") ➞ True
 correct_signs("13 > 44 > 33 > 1") ➞ False
 correct_signs("1 < 2 < 6 < 9 > 3") ➞ True
```

In [42]:
```python
def checkEquality():
    in_string = input('Enter the inequality: ')
    out_bool = eval(in_string)
    print(f'{in_string} ➞ {out_bool}')

for x in range(3):
    checkEquality()
```

```
Enter the inequality: 3 < 7 < 11
3 < 7 < 11 ➞ True
Enter the inequality: 13 > 44 > 33 > 1
13 > 44 > 33 > 1 ➞ False
Enter the inequality: 1 < 2 < 6 < 9 > 3
1 < 2 < 6 < 9 > 3 ➞ True
```

3.Create a function that replaces all the vowels in a string with a specified character ?

Examples:

```
replace_vowels("the aardvark", "#") ➞ "th# ##rdv#rk"
replace_vowels("minnie mouse", "?") ➞ "m?nn?? m??s?"
replace_vowels("shakespeare", "*") ➞ "shksp**r"
```

In [20]:
```python
def replaceVowels():
    vowels = ['a','e','i','o','u','A','E','I','O','U']
    in_string = input("String: ")
    in_string_copy = in_string
    in_char = input('Replacement character: ')
    for ele in in_string:
        if ele in vowels:
            in_string = in_string.replace(ele,in_char)
    print(f'{in_string_copy} {in_char} ➞ {in_string}')

for x in range(3):
    replaceVowels()
```

```
String: the aardvark
Replacement character: #
the aardvark # ➞ th# ##rdv#rk
String: minnie mouse
Replacement character: ?
minnie mouse ? ➞ m?nn?? m??s?
String: shakespeare
Replacement character: *
shakespeare * ➞ sh*k*sp**r*
```

4.Write a function that calculates the factorial of a number recursively ?

In [26]:
```
def factorial(n):
    if n==0:
        return 1
    return n * factorial(n-1)

print(f'factorial(5) ➞ {factorial(5)}')
print(f'factorial(3) ➞ {factorial(3)}')
print(f'factorial(1) ➞ {factorial(1)}')
print(f'factorial(0) ➞ {factorial(0)}')
```

```
factorial(5) ➞ 120
factorial(3) ➞ 6
factorial(1) ➞ 1
factorial(0) ➞ 1
```

5.Hamming distance is the number of characters that differ between two strings ?

To illustrate:

`String1: "abcbba"`

`String2: "abcbda"`

Hamming Distance: 1 - "b" vs. "d" is the only difference.
Create a function that computes the hamming distance between two strings.
Examples:

```
hamming_distance("abcde", "bcdef") ➞ 5
hamming_distance("abcde", "abcde") ➞ 0
hamming_distance("strong", "strung") ➞ 1
```

In [31]:
```
def genHamDistance():
    in_string_1 = input('Enter the String_1: ')
    in_string_2 = input('Enter the String_2: ')
    if len(in_string_1) == len(in_string_2):
        count = 0
        for i in range(len(in_string_1)):
            if in_string_1[i] != in_string_2[i]:
                count = count+1
        print(f'Hamning Distance b/w {in_string_1} and {in_string_2} ➞ {count}
    else:
        print('Both Strings Must be of Same Length')

for x in range(3):
    genHamDistance()
```

```
Enter the String_1: abcde
Enter the String_2: bcdef
Hamning Distance b/w abcde and bcdef ➞ 5
Enter the String_1: abcde
Enter the String_2: abcde
Hamning Distance b/w abcde and abcde ➞ 0
Enter the String_1: strong
Enter the String_2: strung
Hamning Distance b/w strong and strung ➞ 1
```
